

BULK SYSTEM BAGS

RETURNABLE & REUSABLE BULK BAGS

Our Environmental and EcoDry bulk bags are reusable and fully capable of holding up to 4000 lb of dry material - effectively replacing the 50 lb paper sack systems. In addition, they can protect the dry materials from harmful UV rays for an extended period of time.

FEATURES:

Save Space

Waterproof bulk bags are the cornerstone of our complete system. These bags are capable of being lifted by crane or forklift and are watertight and dust free. The empty bags collapse to 1/20 of their full volume size, which allows for compact shipping return to the filling points of origin.

Reduce Waste

The products are packaged without any paper sacks or shrink-wrap. Therefore there is no waste to dispose of. You will save money because our waterproof bags protect leftover material, keeping them ready for your next job.

Reduce Injuries

The active mud systems on deepwater rigs can range from 15,000 to 25,000 barrels, which requires large amounts of chemical additions on a daily basis. Our system virtually eliminates the potential for lifting injuries by eliminating 50 lb or 100 lb bags. Dust inhalation is drastically reduced since the products are already bagged and do not need to be cut open and the contents dumped into a hopper.

BULKING SYSTEM:

- Bulk Bags
- Enviro Bags
- Trash Bags
- Tread Protector
- Spreader Bar
- Bag Rack
- Hoppers
- Customized Bulk Solutions Handling

“Paper sacks are neither safe nor efficient. Rig workers have to lift, cut and dispense the contents of each 50 lb bag. With today’s rigs having 15,000 - 25,000-bbl capacities, this can be a huge volume of daily chemical additions that expose these workers to dust and injury.” - Ban Green *FOUNDER PRECISION PROLINE*

THE EVOLUTION OF BULK STORAGE

Precision Proline has developed and patented a bulking system to accommodate a wide range of applications:

Pallets of 50 lb sacks need to be lifted, ripped open and disposed.

Disposable bulk bags are not waterproof, require a plastic inner liner and pallet shrink-wrap bags, which is a lot of waste. After 30 days in harmful UV rays the bags are no longer good.

Precision Proline EcoDry bags are constructed of a nylon weave then coated with PVC vinyl. Our bags are strong, affordable, reusable and can remain in the sun without any damage to the bags or contents for extended periods of time.
